AD1000 –Dripless Oil Annual Rustproofing

TECHNICAL DATA SHEET

BENEFITS

AD1000 is a coating designed to protect the underbodies of vehicles against atmospheric corrosion and road salt. When properly applied, this product will not drip and is highly resistant to wash-off. The coating will not completely dry but will form a tacky finish on metal surfaces. It is self healing!

GENERAL INFORMATION

AD1000 is a formulated oil based product specifically blended as an Annual Drip-Free Rust Preventive Coating. It is designed to be used as an exterior and interior coating (doors and rocker panels). The product was formulated to ensure penetration of weld seams and other crevice locations susceptible to rust and corrosion. It does not harden with age; it remains tacky and pliable and will not crack or peel. AD1000 is not harmful to rubber, plastic or electric circuitry. Formulation from new material ensures no acids in the product or unpleasant odours. It is a thixotropic dispersion of an inorganic/organic complex, oxidized petrolatum and oil, with rust inhibitors added. This coating is polar and forms an excellent bond to ferrous and non-ferrous metals.

DIRECTIONS

This product can be applied with a pressurized canister or low ratio airless spray system. Prepare metal surfaces by removing excess dirt and moisture. A slightly oily surface is acceptable but discernible films should be removed.

TECHNICAL DATA

Colour:	Light amber
Flash Point 200°C:	Non Flammable
Thickener:	Calcium
Consistency:	Light Greasy Film

AD1000 is available in these sizes:

Part # 21420	1 x 20 L pail
Part # 21445	1 x 205 L drum

Proudly  Canadian
